

Software Engineer / Product Manager / Tea Drinker

Recent Experience

Technical CoFounder July 2015 – November 2016
Stryve
Led the development, and deployment of a cross platform (iOS, and web) mobile app that connects personal trainers with clients. Includes real-time chat, push notifications, scheduling, and automation to make payments between trainers and their clients seamless.

Lead Software Engineer May 2013 – April 2015
Client Heartbeat
Led a small team to consistently refine and improve a SaaS web app that receives thousands of data points per second. Managed the product design and development to appeal to different market verticals. Helped scale and develop the business to increase revenue over 500%.

Senior Software Engineer May 2012 – May 2013
The Idea Lab
Headed a small, autonomous team to design, develop, and deploy two SaaS web apps handling 1M views per day during launch. Engineered a real-time chat system that supports thousands of users and scales horizontally while maintaining concurrency.

Education

Bachelor of Information Technology (Software Engineering),
Bachelor of Multimedia (Interactive Entertainment)
Griffith University
Managed multiple projects including managing a team of 5 to plan, document, and deploy a large scale project for an assigned client over the course of the final year.
